

NEW from the producer of the famous **STALKO** feeders
Stand Alone Feeders & Fence Line Feeders

STALKO

Part of Groba feeding systems

STALKO SA-A feeder
for weaners or finishers

STALKO SA feeder
for weaners or finishers

STALKO FL feeder
for weaners or finishers

STALKO proudly presents a new line of round feeders to be placed in the middle of the pen (stand alone feeders) and for mounting in pen walls (fence line feeders). Three different kind of feeders, all three available for weaned piglets or finishers.

STALKO SA-A feeder (Stand Alone Automatic, no nipples)

The STALKO SA-A is a group feeder to be placed in the middle of the pen so it can be accessed by pigs all around. The feeder can be easily mounted on any slatted floor or solid floor. We advice this feeder for groups of 40 weaners (with a maximum of 50 weaned piglets) from 6 - 35 kg or 50 finishers from 25 - 120 kg. The SA-A feeder has 8 feeding places around and no nipples but an automatic water level instead.

The advantages of the STALKO SA-A feeder in short:

- No water spilling, no feed spilling
- Water pressure is always right; no doubt about proper water yield from the nipples
- No pigs playing around with the drinking nipples which normally causes water waste
- No nipples that will get clogged
- No feed und water all the time getting spoiled
- Water in a separate ring; always fresh water available
- Amount of dead water in water pipe reduced to a minimum
- Good water absorption according to natural behaviour
- An optimal start for weaned piglets (no weight dip)
- Higher end weight compared to pigs on traditional feeders
- Better feed conversion compared to traditional feeders
- Significant cost savings on food, water & manure disposal

STALKO SA feeder (Stand Alone Feeder with nipples)

The STALKO SA is a freestanding feeder for weaners or finishers in groups with a maximum of 40 pigs. The feeders is completely build out of stainless steel parts (grade 304) in combination with quality plastic. This ensures a long service life and optimal hygiene. The feeder has no sharp edges and a animals friendly design that allows peaceful and comfortable intake without competition. The special delivery device in the hopper eliminates possible bridging of feed and makes the feeder suitable for pellets, crumb or meal (mixed with max. 35% CCM). Hopper volume is 90 liter.

This type of STALKO Stand Alone Feeder is equipped with nipples. It has 4 drinking nipples and 8 separated feeding places so it accommodates many pigs around the feeder to drink and eat at ease. A sophisticated deep trough ensures no food can be spilled.

STALKO FL feeder (Fence Line Feeder)

The STALKO FL feeder is a group feeder which has to be mounted in the pen wall so it can be used double sided by weaned piglets (6 - 35 kg) or finishers (25 - 120 kg). The FL feeder can be easily mounted in any kind of pen wall (plastic or concrete). Provisions to mount the feeder to the pen wall and to the floor already are present. The construction is sturdy, has no sharp edges and is animals friendly. The feeding trough and drinking bowls are nicely rounded so no feed will stick and can be easily cleaned. To the left and right from the feeding trough high separation walls separate the water bowls. These drinking bowls are equipped with high quality nipples. Hopper volume is 90 liter.
